

## Problems Associated with medications taken by end stage renal failure patients

Ashraf Salah Ibrahim El Ghaname

Cairo university, Egypt

### Abstract:

1. To reach a level of understanding with the teamwork
  - This understanding is reached by
    - Taking care of your team members , accepting their weakness and make use of their strength
    - Being trust worthy by being aware of your specialty and up to date as much as you can . Saying only facts in medicine , no more no less ,
2. Relation with other department colleagues , if there is heart feeling or hatred as you are the only GP in charge of his department (dialysis unit )this will be reflected as complains from them to the administration on every action not understood to them
3. Relation with the administration This is gained by practicing and taking feed back about your work whether you are doing well or not , and are work on knowledge or just by try and error
4. Feed back of your work at higher administration
 

That's gained by correct unexplained decisions above your restrictions where complains are reported about you
5. Strength of the effect of families of the patients against doctors orders
6. Managing to prescribe a suitable ttt for the patient that can avoid clashes with anyone without altering the patients

### Biography:
